Sample Procurement Flow

Project A awarded to us - from award intake to purchase order and fulfilment

Client / procuring entity	DOH Region V
Project	Project A - Purchase of pharma supplies Q3
Reference	RFQ-2026-0042
Amount awarded	PHP 482,000.00
Date awarded	July 3, 2026
Delivery period	August 1 - 15, 2026
Awarded items	3 line items, 50 boxes each
Current status	In progress

Key rule: suppliers never receive our quantities. The RFQ / quotation request lists item names and pack sizes only. The requested quantity stays internal and first appears to the supplier on the purchase order.

1. Record the award - Projects

1. Create Project A from the Notice of Award: client/entity (DOH Region V), reference (RFQ-2026-0042), mode of procurement, amount awarded (PHP 482,000.00), date awarded (July 3, 2026), and delivery period (August 1 - 15, 2026).
2. Add the awarded line items with their contractual quantities and units.
3. Set the project status to Awarded / In progress.

   Quantity check: contractual quantities only; kept internal.

2. Build the internal demand - Preplist

1. Create a prep list for Project A, copying the awarded items and quantities.
2. Review stock on hand; per item, reduce the quantity or waive it entirely.
3. Keep the remaining items Pending.

   Quantity check: internal only. This is the number suppliers must never see.

3. Source suppliers - Generate quotation (RFQ)

1. Choose suppliers per item, or quick-select the whole prep list for one supplier.
2. Generate one PDF and one Excel file per supplier. The files list item names and pack sizes only.
3. Send the files to the selected suppliers and record who received what.

Supplier sees: item names and pack sizes. No quantities.

4. Receive quotations - Quotation

1. Each supplier returns a unit price per item and attaches its quotation document.
2. Record the quotation; status moves from Awaiting quote to Quoted (partial quotes are allowed).
3. Internally compute the estimate: unit price x requested quantity.
4. The quoted unit prices feed the Price Index for comparison.

   Supplier gives price only; we apply our own quantity internally.

5. Evaluate and award to suppliers

1. Compare suppliers per item using the Quotation and Price Index views (best price, average, trend).
2. Award each item to a supplier. A prep list may be split across several suppliers.
3. Record the awarded quantity per supplier and mark the winning quotation(s) Awarded.

   The requested quantity is now split into supplier-level purchase quantities.

6. Prepare the PO - /purchase-order/create/{quotation}

1. From the awarded quotation, click Generate PO.
2. Select the quoted items to order. Unpriced items stay disabled and are labelled "No quote".
3. Set the purchase quantity per item. It defaults to the requested quantity, may be reduced for splits or stock, and can never exceed the allocation.
4. Fill in expected delivery, payment terms, deliver-to, and supplier notes.
5. Click Create purchase order. The PO is created as a Draft.

   Quantity check: the ordered quantity finally appears here.

7. Issue the PO

1. Review the draft: items, quantities, prices, and delivery details.
2. Send the PO to the supplier. Status: Draft -> Sent to supplier.
3. The supplier acknowledges the order and confirms the delivery date.

   The supplier now sees the ordered quantity on the PO document.

8. Receive and fulfil

1. Record each delivery as it arrives; partial deliveries are allowed.
2. PO status: Sent to supplier -> Partially received -> Completed.
3. Project items move from Pending to Fulfilled; items not purchased are marked Waived.
4. Endorse the supplier invoice for payment.

   Compare the delivered quantity against the ordered quantity on each PO.

9. Close out

1. When every item is Fulfilled or Waived, set Project A to Completed.
2. Store the actual purchase prices in the Price Index for future estimates.
3. Project progress reflects the outcome, for example "3/3 items fulfilled".

Quantity visibility by stage

Stage	Document	Shows quantity?
Award / contract	Project	Yes - contractual quantity
Demand planning	Prep list	Yes - internal only
Supplier sourcing	RFQ PDF / Excel	No - item names and pack sizes only
Quotation	Supplier submission	No - unit price only; quantity applied internally
Supplier award	Quotation record	Yes - allocation per supplier
Purchase order	PO document	Yes - ordered quantity
Receiving	PO status	Yes - delivered vs ordered

What the app supports today

Step	Current state
Project to prep list link	Not wired; dummy data
RFQ file generation	Stub (console log + TODO)
Sending RFQs to suppliers	Not implemented
Quotation entry	Read-only dummy data
Supplier award action	Not implemented; statuses are Quoted / Awaiting
PO creation	Preparation screen built; persistence still a TODO
Receiving	PO statuses exist; no receive action
Project fulfilment	Dummy item statuses only
